

Kabola Chilled-water Interface

Marinetec/ Kabola have a decade of experience in successfully integrating **Kabola** diesel-fired boilers with many leading marine air-condition manufacturers and ship builders. Using our integration system allows a vessel to:

- Operate in cold climate with seawater temperatures below 41° F (5° C).
- Operate in heating mode at docks with limited shore power supply.
- Use energy-saving and environmentally friendly waste heat from main engine and generators.
- Provide a large volume of hot water fast, when integrated with our **Solaris Marine water heaters**.
- Provide easy integration with floor heating to provide ultimate passenger comfort.

The **Kabola** diesel-fired boilers can supply heat to any size of vessel, with a large model selection of boilers from 30,000 BTU to 400,000 BTU. **Kabola** boilers come with **CE** certification and can be built with **Lloyds** Certification.
